## (54) SILVER HALIDE COLOR PHOTOGRAPHIC SENSITIVE MATERIAL

## (57)Abstract:

PURPOSE: To improve the color reproducibility of the subject material by incorporating each of specified nondiffusion cyan coupler and nondiffusion magenta coupler in photosensitive layers having different color sensitive properties with each other, respectively.

CONSTITUTION: Then nondiffusion cyan coupler shown by formula I and the nondiffusion magenta coupler shown by formula II are incorporated in each of the photosensitive layers having the different color sensitivities with each other, respectively. In formulas I and II, R1 is acylamino or alkyl group, R2 is hydrogen or halogen atom or alkyl group and the like R3 is alkyl, aryl, a heterocyclic ring and the like, or amino or a heterocyclic amino group, R4 is hydrogen atom or a substituting group, Za and Zb are each =C(R5)- or =N-group, X1 is a group capable of forming a fluorescent compd. by being released by coupling a coupler with the oxidant of a developing main agent, X2 is hydrogen atom or a group capable of being released by coupling. Thus, the color reproducibility of the photosensitive material is improved.

I

II
